-

3. AI Product Recognition

Flow 1: Scan Product

Add New product

Components:

- Searchable dropdown (product name from a list of our seeded products) or have a new name
- If the product is in our DB then category field will be selected automatically, else we'll need to select the category from a searchable dropdown
- Images upload (for the product itself / not expiration)
- Price input
- Description input
- Quantity input
- Expiration date (either input manually which will not be verified, or open camera and take an image of the expiration date)
- If quantity > 1, we'll show a checkbox to select "All the quantity has the same expiration date"
- If not selected, then we'll prompt him to take N images, for each image enter the quantity of products which have this expiration date
- Show a loading screen with a nice text when OCR is loading
- Once verified, display each expiration date with quantity for each one
- If any OCR image is not visible, prompt the user to re-take the image
- Confirm/Publish button
