

4. Business Portal

Flow 1: Store Registration & Verification

Screens

Business Signup

Components:

- Store name input
- Business type selector (Supermarket / Restaurant / Bakery / Café / Hotel / Convenience store / Grocery chain)
- Owner name, email, phone inputs
- Password / Confirm password
- Continue button

Document Upload

Components:

- Commercial registration upload
- Tax ID upload
- Store photo upload
- Submit for review button

Verification Pending

Components:

- Status card (Under review)
- Estimated review time text
- Contact support link

States

Approved

→ Redirect to Store Profile setup

Rejected

→ Rejection reason banner + re-submit button

Missing documents

→ Inline validation per document field

Flow 2: Store Profile Management

Screens

Store Profile

Components:

- Store logo / cover image
- Store name, description
- Contact info (phone, email)
- Operating hours picker
- Save button

Location Management

Components:

- Map picker
- Manual address fields (City, District, Street, Building no.)
- Delivery radius slider (if store offers delivery)
- Save button

States

Success

→ Confirmation toast

Invalid location

→ Inline error, map pin required

Flow 3: Inventory Management

Screens

Inventory List

Components:

- Search bar
- Filter chips (Category / Status: Draft, Pending confirmation, Published, Out of stock)
- Product cards (image, name, quantity, price, status badge)

- Add product button (manual entry / bulk upload)

Add Product (Manual)

Components:

- Product name input
- Category dropdown
- Original price input
- Quantity input
- Image upload
- Expiration date (manual input, or camera capture handed off to AI Product Recognition)
- Save as draft / Publish buttons

Bulk Upload

Components:

- CSV/Excel file picker
- Template download link
- Upload progress bar
- Row-by-row validation results table (Row #, Field, Issue)
- Confirm import button

States

Upload success

→ Summary: X products imported, Y flagged for review

Upload error

→ Error banner listing malformed rows

Pending confirmation

→ Product locked from publishing until expiration date is confirmed by owner

Flow 4: Automation Settings

Screens

Automation Mode

Components:

- Mode selector (Manual / Assisted / Autonomous) as radio cards, each with a short description

- Price floor input (per category or per product override)
- Max per-cycle change display (fixed at $\pm 15\%$, read-only info text)
- Save button

States

Mode changed

→ Confirmation modal explaining impact before saving

Floor price missing

→ Inline validation, required for Autonomous mode

5. Dynamic Pricing Engine

Flow 1: Pricing Rules Overview

Screens

Pricing Dashboard

Components:

- Products nearing next pricing cycle (list)
- Current price vs. original price per product
- Countdown to next scheduled cycle (4–6h window)
- Filter by automation mode

Flow 2: Pricing Recommendation (Assisted Mode)

Screens

Recommendation Card

Components:

- Product info summary
- Suggested new price + discount %
- Reason text (e.g., "24h to expiry, low recent demand")
- Approve / Reject / Edit buttons

States

Approved

→ Price applied immediately, toast confirmation

Rejected

→ Recommendation dismissed, item re-evaluated next cycle

Edited

→ Owner overrides suggested price within allowed floor

Flow 3: Price History & Audit

Screens

Price History (per product)

Components:

- Timeline list (timestamp, old price → new price, trigger reason, mode at time of change)
- Filter by date range

States

No history yet

→ Empty state ("No price changes yet")

6. Ordering System (Business Side)

Flow 1: Incoming Orders Dashboard

Screens

Orders List

Components:

- Tabs (Pending / Confirmed / Preparing / Delivered / Cancelled)
- Order card (order #, consumer name, items count, total, fulfillment type icon)

- Search/filter by date or order number

Flow 2: Order Details & Status Update

Screens

Order Details

Components:

- Item list with quantities and locked prices
- Consumer info (name, pickup/delivery address if applicable)
- Status stepper (Pending → Confirmed → Preparing → Delivered)
- Action buttons (Confirm / Start Preparing / Mark Delivered / Cancel)

States

Stock conflict on confirm

→ Warning banner if an item's stock changed since order was placed

Cancelled

→ Reason selector (Out of stock / Store closing / Consumer request) + confirm

Delivery handoff

→ Status auto-updates once Delivery Tracking (Dev 1) reports completion

Flow 3: Order Dispute Handling

Screens

Dispute Card

Components:

- Order reference
- Dispute reason (from consumer)
- Response text area
- Resolve / Escalate to Admin buttons

States

Resolved

→ Order marked closed, note saved to order history

Escalated

→ Routed to Administration Portal

7. Administration Portal

Flow 1: User Management

Screens

Users List

Components:

- Tabs (Consumers / Stores / Captains)
- Search bar
- User row (name, status, joined date, quick actions: Suspend / Reactivate / View)

User Detail

Components:

- Profile summary
- Activity log (orders, listings, reports)
- Suspend / Ban / Reactivate buttons

States

Suspended

→ Status badge updates, user notified

Confirm ban

→ Confirmation modal (irreversible action warning)

Flow 2: Listing Moderation

Screens

Moderation Queue

Components:

- Flagged listing cards (reason: low AI confidence / user report)
- Product image, name, store, confidence score
- Approve / Reject / Request changes buttons

States

Approved

→ Listing stays live, removed from queue

Rejected

→ Listing unpublished, store notified with reason

Empty queue

→ "No listings pending review"

Flow 3: Analytics Dashboard

Screens

Dashboard Home

Components:

- KPI cards (Active users, Total orders, Revenue recovered)
- Trend chart (orders over time)
- Top-performing stores list
- Date range filter

Flow 4: Audit Logs

Screens

Audit Log

Components:

- Filterable table (Action type: Pricing change / Listing moderation / Donation decision, Actor, Timestamp)
- Export button (CSV)

States

No results for filter

→ Empty state with reset filters option
